(and many others...)

Technical Training Materials

IRI experience technical developers, who have previous hands-on experience in plant operators and maintenance.

We develop detailed technical descriptions of plants systems and equipment configuration, plant controls, and processes for specific plant systems and equipment.

Plant specific photos, drawings, graphics, operation and maintenance illustrations and other information specific to the plant are included.

IRI Technical Training Materials are not merely add-ons or additions to the generic training materials as sold by others.

Developed as a complete training module that consists of;

- System or Maintenance Description
- System Operating Procedures
- Maintenance Procedure (Preventive and/or Corrective)
- Job Performance Measures or Checklist
- Written Test Items
- Lesson Plans or Facilitators Guide

Developed as written documents, as bound reference books, provided on CD-ROM or on a plant server with linked files and graphics.

Operating and Maintenance Procedures

IRI develops detailed operating and maintenance procedures. These include

- Plant Startup and Shutdown Procedures (Unit Integrated Operating Procedures)
- Corrective and Preventive Maintenance Procedures
- Equipment Operating Procedures
- Safety Procedures
- Alarm Response Manuals
- Contractor Safety Procedures
- Environmental and Emergency Response Procedures

PowerPoint Presentations

Training Materials are also provided as a self-driven Power Point presentation with animation, graphics, voice-over, sound effects and linked video.

Plant Operating Procedures

The Staff of IRI includes professional writers and engineers with a keen understanding of operation and maintenance of industrial facilities.

They have extensive experience in providing services throughout the United States and internationally for government and commercial industries.

Industrial Resources technical writers develop a wide variety of technical training materials, operation and maintenance documentation.

We use formats that are designed to be easy to us so that you can update the content and graphics as needed when plant configuration changes.

For details about this and other IRI services contact one of our technical personnel
